## **Summary of my Activities and Future Plans**

I've been teaching in the Max Stern Yezreel Valley College from 2010. I'm interested in research of active learning methods and decision-making processes among nurses and nursing students. Former, I performed or participated in 4 research in these fields, that were presented in nursing research conferences abroad. I implement the strategies of active learning both in the Max Stern Yezreel Valley College and Carmel Medical Center.

Last year I graduated with a Ph.D. degree in the School of Graduate Studies of Sackler Faculty of Medicine, Tel Aviv University. The subject of my Ph.D. research is The influence of simulation-based learning on nurses' and nursing students' clinical decision-making process and the mediation effect of cognitive structure. The research was performed under the supervision of Prof. Yoram Bar Tal.

In future I plan to research:

1. Influence of the simulation-based studies on various aspects of nursing practice.  
(with collaboration of simulation center staff ).
2. Strategies of improvement teaching in big classes.
3. Strategies to improve the critical thinking of the students.
4. Improvement of pain management.
